**EXPERTISE THESIS ABSTRACT**

By its natural structure and variety of uses, water resources are affect many sectors. Many different water management approaches formed as a result of these affects and “integrated water management” concept came out which foresees the involvement of stakeholder involvement to the decision making process.

Management is a phenomena which can not just be understood by study of theories and concepts but also with the examination of its applications. Within this context, examination of legal and institutional evolution and assessment of applications from different countries have been made within the framework of integrated water management approach.

According to the purpose of this thesis study our country’s water management system has been reviewed, institutional and legal suggestions have been made to ensure an integrated water management.

**Key words:** Integrated Water Management, Water Management Legislation, Water Management Institutional Structure
